Thallium Can be Toxic
Even in Small Amounts
Test Now | Detect Early | Stay Safe

Significance

The Thallium Test measures the amount of thallium, a highly toxic heavy metal. Thallium exposure can happen from contaminated food, water, air, or through certain industrial jobs. Even small amounts can be harmful, causing symptoms like stomach pain, hair loss, nerve damage, or heart and kidney problems. This test helps detect thallium poisoning early and monitor occupational or environmental exposure.
