Early & Accurate Detection For Better Managing Hepatitis B Infection

Anti Hepatitis B Core Antigen (AHBC) - IgM

@ ₹ 785/-

Significance

The test detects IgM antibodies against the core antigen of the Hepatitis B virus (HBV). It is primarily used to diagnose acute or recent Hepatitis B infection, as IgM antibodies typically appear during the early phase of infection. The HBCM test is ordered based on symptoms, including jaundice, fatigue, nausea and abdominal pain. A positive result indicates a recent HBV infection or reactivation. This test is crucial for early detection, monitoring disease progression and guiding treatment decisions for Hepatitis B.

First National Diagnostic Chain to have **100%** of its Labs with **NABL Accreditation**#

CAP From 2007

Trust that Thyrocare reports are **Accurate & Reliable***

Reports are released within an average **TAT of ~3.5 hours** of samples reaching the lab
