Detect, Diagnose and Manage Serious Health Issues

Lactate Dehydrogenase (LDH)

@ ₹ 390/-

Significance

The test measures the level of lactate dehydrogenase, an enzyme found in almost all of the body's tissues. Normally, LDH levels in the bloodstream are low, but they can increase when there is tissue damage or disease. This test detects conditions that cause cell damage or tissue breakdown, such as heart disease, liver disease, certain cancers, muscle injury and infections.

First National Diagnostic Chain to have **100%** of its Labs with **NABL Accreditation**#

CAP
From 2007

Trust that Thyrocare reports are **Accurate & Reliable***

Reports are released within an average **TAT of ~3.5 hours** of samples reaching the lab

*#As on 5th December 2024 | *As per a survey on doctors' perception of laboratory diagnostics (IJARIIT, 2023)*
