Smart Monitoring of Multiple Myeloma and Other Plasma Cell Disorders

Significance

The Kappa Light Chain test measures the amount of free kappa light chains in the blood, which are parts of antibodies made by the immune system. It is commonly used to help diagnose and monitor multiple myeloma and other plasma cell disorders, where abnormal levels can indicate excessive or irregular antibody production.

Kappa Light Chain

₹ 710/-

First National Diagnostic Chain to have **100%** of its Labs with **NABL Accreditation***

CAP From 2007

Trust that Thyrocare reports are **Accurate & Reliable***

98% Reports released **Within 06 hours** after samples reach the lab

*As on 5th December 2024 | *As per a survey on doctors' perception of laboratory diagnostics (IJARIIT, 2023)
