Spot Abnormal Antibody Activity Early with This Test

Significance

The Lambda Light Chain test measures the amount of free lambda light chains in the blood, which are parts of antibodies produced by plasma cells. It helps detect and monitor conditions like multiple myeloma, light chain amyloidosis, and other plasma cell disorders, where abnormal levels can indicate irregular or excessive antibody production.

Lambda Light Chain

₹ 710/-

First National Diagnostic Chain to have **100%** of its Labs with **NABL Accreditation***

CAP From 2007

Trust that Thyrocare reports are **Accurate & Reliable***

98% Reports released **Within 06 hours** after samples reach the lab

*As on 5th December 2024 | *As per a survey on doctors' perception of laboratory diagnostics (IJARIIT, 2023)
