Uncover Inherited Risks That Can Lead To Heart Attack or Stroke

Significance

The Lipoprotein (a) or Lp(a) test measures the level of a specific type of cholesterol, that can increase your risk of heart disease and stroke. High Lp(a) levels are mostly inherited and may not change with diet or lifestyle. This test helps identify people at risk of early or unexpected heart problems, especially when other cholesterol levels are normal.

Lipoprotein (a) [Lp(a)]
