Genital Discomfort Could Mean More
Get Tested for Mycoplasma Genitalium Now!

Significance

The Mycoplasma genitalium PCR test detects the presence of Mycoplasma genitalium, a sexually transmitted bacterium. It helps diagnose infections that can cause symptoms like genital irritation, discharge, or pelvic pain, and is especially important as this bacteria is often resistant to common antibiotics. Early detection supports proper treatment and helps prevent complications or further spread.

Mycoplasma Genitalium PCR
