Accurate and Reliable Diagnosis of Autoimmune Disorders

ANA Titre (Immunofluorescence)

@ ₹895/-

Significance

The test detects and measures antinuclear antibodies (ANA) in the blood. These antibodies target the nuclei of cells and are commonly associated with autoimmune disorders such as systemic lupus erythematosus (SLE), rheumatoid arthritis and scleroderma. The test involves immunofluorescence to provide a detailed pattern and level of ANA, helping physicians diagnose, monitor and manage autoimmune conditions. The test is recommended when you have unexplained symptoms like fever, rash, blisters, or skin color changes, fatigue, joint pain, stiffness and swelling, muscle pain and chest pain

100% ACCREDITED LABS

First National Diagnostic Chain to have **100%** of its Labs with **NABL Accreditation**[#]
