Root Causes Analysis to Liver Diseases and Metabolic Disorders

Total Bile Acid

@ ₹1,550/-

Significance

The test measures the levels of bile acids in the blood. This test is used to assess liver function and detect liver-related disorders like cholestasis, where bile flow is obstructed, or cirrhosis, a condition that affects the liver's ability to process bile acids properly. It is also useful in monitoring intrahepatic cholestasis of pregnancy (ICP), a condition in which bile flow is impaired, posing risks to both mother and the baby.

First National Diagnostic Chain to have **100%** of its Labs with **NABL Accreditation**#

CAP
From 2007

Trust that Thyrocare reports are **Accurate & Reliable***

Reports are released within an average **TAT of ~3.5 hours** of samples reaching the lab
