Reveal the Iron Balance
With a Single Test

Transferrin Serum

@ ₹ 470/-

Significance

The Transferrin Serum Test measures the level of transferrin, a protein produced by the liver that plays a key role in transporting iron throughout the body. This test helps evaluate iron metabolism and is commonly used to diagnose and monitor conditions like iron deficiency anemia, chronic diseases, or iron overload disorders such as hemochromatosis. The test provides valuable insights into the body's iron status and liver health. It is often performed alongside other iron-related tests for a complete assessment.
