Single Test Important for Vision, Immunity and Skin

Vitamin A

@ ₹2,455/-

Significance

The Vitamin A test measures the level of retinol in the blood to assess Vitamin A levels. Deficiency can lead to vision issues, immune impairment, and skin problems, while excess levels may cause toxicity, impact liver function and bone health. This test is recommended for individuals with symptoms of deficiency or toxicity, those with malabsorption issues or people on restrictive diets. One can also opt for this as a preventive health check to understand body functions before any health issues occur.

First National Diagnostic Chain to have **100%** of its Labs with **NABL Accreditation**#

CAP From 2007

Trust that Thyrocare reports are **Accurate & Reliable***

Reports are released within an average **TAT of ~3.5 hours** of samples reaching the lab
