

One Missed Clot Can Be Life-Threatening Check Your Antibodies Today!

Significance

The Cardiolipin Antibody (ACL) - IgA test is used to detect IgA antibodies against cardiolipin, a type of phospholipid found in cell membranes. The presence of these antibodies may indicate autoimmune disorders such as antiphospholipid syndrome (APS), which can increase the risk of abnormal blood clotting, miscarriages, or other complications. This test helps in evaluating unexplained blood clots, recurrent pregnancy loss, or suspected autoimmune conditions.

Cardiolipin Antibody (ACL) - IgA
