

Rapid Test For Early Detection of Scrub Typhus

Significance

Scrub Typhus Rapid Test (IgG/IgM) test is used to detect antibodies (IgG and IgM) against the bacteria that causes scrub typhus — a serious infection spread by the bite of infected mites. It helps diagnose scrub typhus early by identifying if your body is fighting a current (IgM) or past (IgG) infection. Early diagnosis is important to start the right treatment and avoid complications like fever, organ damage, or breathing problems.
