Detect Chikungunya Accurately for Timely Management

Chikungunya Rapid Test (IgG/IgM)

@ ₹605/-

- Chikungunya - IgG rapid test
- Chikungunya - IgM rapid test

Significance

The test detects IgG and IgM antibodies specific to the Chikungunya virus, which is transmitted through mosquitos, leading to symptoms such as high fever, severe joint pain, fatigue and headache. The presence of IgM antibodies suggests a recent or active infection, while IgG antibodies indicate past exposure. This test allows healthcare providers to identify the infection quickly and recommend appropriate care, especially in areas prone to mosquito-borne diseases.
