Spot Electrolyte Imbalance Before it Drains Your Energy

Significance

The Urine Electrolytes Test measures the levels of key electrolytes- such as sodium, potassium and chloride in the urine. These minerals help maintain the body's fluid balance, nerve function and muscle activity. The test helps doctors evaluate kidney function, detect dehydration and identify imbalances caused by conditions like kidney disease, hormonal disorders, or certain medications.

Urine Electrolytes (3 Parameters)

₹341/-

- Urinary Chloride
- Urinary Potassium
- Urinary Sodium

First National Diagnostic Chain to have **100%** of its Labs with **NABL Accreditation**[#]
