

An Imbalance in Albumin & Globulin Can Signal Trouble Detect Early

Significance

The Serum Albumin-Globulin Ratio measures the balance between two main types of proteins - albumin and globulin. Albumin helps maintain fluid balance and transport nutrients, while globulins support immune function. An abnormal A/G ratio can indicate liver or kidney problems, infections, or immune disorders. This test helps assess overall protein health and detect underlying conditions affecting the vital organs.

Serum Albumin-Globulin Ratio (4 Parameters)

₹330/-

- Serum Alb/Globulin Ratio
- Protein - Total
- Albumin - Serum
- Serum Globulin
