A Key Test For Unexplained Clotting & Autoimmune Disorders

Significance

Beta 2 Glycoprotein 1 - IgG test detects IgG antibodies against Beta-2 Glycoprotein 1, a protein involved in blood clotting. The presence of these antibodies may indicate an increased risk of abnormal blood clots and is commonly used to help diagnose Antiphospholipid Syndrome (APS), an autoimmune disorder. It is especially useful in patients with recurrent miscarriages, unexplained blood clots, or autoimmune conditions like lupus.
