Don't Ignore Persistent Gut Discomfort! Detect Intestinal Inflammation Early with a Simple Stool Test

Significance

Fecal Calprotectin (CLIA) test is a simple, non-invasive stool test used to detect inflammation in the intestines. It helps differentiate between inflammatory bowel diseases (IBD) like Crohn's disease or ulcerative colitis and non-inflammatory conditions such as irritable bowel syndrome (IBS). Elevated calprotectin levels indicate intestinal inflammation, helping doctors decide if further investigations like colonoscopy are needed and also monitor treatment response.

Who Should Take This Test?

Consider this test if you have:

- Chronic diarrhea
- Abdominal pain or cramps
- Blood in stool
- Unexplained weight loss
- Suspected IBD

Fecal Calprotectin (CLIA)
