

Track the Hidden Inflammation Caused by Pollution Exposure

Significance

The Pollution Inflammation Profile helps assess how your body is reacting to pollution and environmental irritants by measuring key inflammation and allergy markers. It includes C-Reactive Protein (CRP), which detects active inflammation in the body; Erythrocyte Sedimentation Rate (ESR), which shows the presence and severity of inflammation; and Total IgE, which indicates allergic responses triggered by pollutants, dust, smoke and other environmental factors. Together, these tests give a quick overview of how pollution may be affecting your immune system and overall health.

Pollution Inflammation Profile (3 Parameters)

₹799/-

- C-Reactive Protein (CRP)
- Erythrocyte Sedimentation Rate (ESR)
- Total IgE

First National Diagnostic Chain to have **100%** of its Labs with **NABL Accreditation**[#]
